

GRP Vertical ladders

Lichtgitter GRP vertical ladders are made of pultruded GRP profiles and are constructed to provide excellent protection in areas with high corrosion. Easily transportable parts and simple assembly are an excellent alternative to traditional vertical ladders. The special profile of the safety profiles used to construct the rungs provide optimum non-slip safety. The safety cage also provides additional safety.

GRP vertical ladders are suitable for both indoor and outdoor use. Our GRP ladders are produced in accordance with EN ISO 14122-4:2004 Safety of machinery – permanent means of access to machinery – part 4: fixed ladders.

GRP Ladders

Lichtgitter GRP ladders can be produced in yellow and grey as standard. The advantages of GRP ladders become particularly obvious in areas with a chemically corrosive environment. If joints are provided, we will reinforce the square tubing with a PE inner core. The PE insert sockets prevent the rungs from rotating.
