

GRP Toe plate / Kick Boards

Traditionally GRP kick plates and toe boards to platform and walkway edges have been fixed back to existing hand railing standards.

In instances where there is no existing support structure to fix back to, Lichtgitter UK, can offer a GRP kick plate solution by fixing GRP plates, of thicknesses to suit, directly to the edges of moulded GRP gratings.

Where there are transitions in directions the GRP plate is further enhanced and strengthened by use of riveting GRP angles at these transitions.
